EDUCATION	<b>State University of New York - Binghamton</b> , NY, USA Ph.D., Computer Science, Fall 2018 - Present (GPA: 3.93/4.00) <b>University of Colombo</b> , Sri Lanka B.S., Computational Physics (Major), July 2017 (GPA: 3.66/4.00)
RESEARCH INTERESTS	Adversarial Machine Learning, Real-Time Machine Learning, Anomaly Detection
RESEARCH PROJECTS	<ul style="list-style-type: none"><li>• <b>RAMP</b> : Real-Time Aggregated Matrix Profile (RAMP) is a machine learning model that is capable of identifying anomalies given a stream of multivariate time series data in real time. RAMP is a semi-supervised model that has online training and provides insight into root causes of anomalies. RAMP shows superior anomaly detection capability for both direct and adversarial attacks for scientific workflows running on Amazon EC2 servers.</li><li>• <b>SciBlock</b> : A Blockchain based tamper proof storage system designed to protect scientific data and provenance from being forged or altered in a distributed collaborative environment. This system provides primitives allowing fast querying of provenance data efficiently and the capability to invalidate wrong/outdated provenance data without altering the blockchain.</li></ul>
